

Ask the Expert: The Hyperconnected Data Center - My Interview with Yvonne Deir of CoreSite

I am super happy to bring another great BrightTALK interview that I was a part of recently at AWS re:Invent 2019 with CoreSite's Yvonne Dier, Strategic Director of Sales. We had a chance to discuss where the hyperconnected data center is headed in 2020 which covers the core challenges (get it...core challenges...zing!) faced by organizations and technology teams as more cloud adoption occurs but latency risks impact the ability to get the best value and performance on cloud infrastructure in hybrid deployments.

CoreSite is tackling how next-generation data centers will power digital transformation, the impact of 5G and the IoT, and we even touch on the classic on-premises vs cloud data center debate.

You can watch the interview here at the BrightTALK site which is free if you aren't already a member (hint: you should join up because there's a ton of great content!)

Ask the Expert: Kubernetes and Hybrid Cloud - My Interview with Chris Wright

I was very lucky to be a part of some live interviews which took place at AWS re:Invent, hosted by the team at BrightTALK. The first interview I did was with Chris Wright, SVP and CTO of Red Hat, where we spoke at length about the value of open source technologies for today's businesses, and

how OpenShift and much more are becoming a powerful part of the public cloud.

The session was titled “Ask the Expert: Kubernetes and Hybrid Cloud” which was a perfect setting. Chris has been a massive part of driving open ecosystems in hybrid cloud and I was very pleased to be invited by the BrightTALK team to lead out the discussion. I’m a long time fan of Chris and the entire Red Hat team.
