

VMware Workstation 10.0.1 is available!

If you are a user of VMware Workstation you will be pleased to know that there is an incremental update available now with the 10.0.1 release today.

What's New with 10.0.1

This is a minimal update to the Workstation 10.x product. Aside from a number of bug fixes, there is a significant addition for those who are working with Windows guests running **Windows 8.1** or **Windows Server 2012 R2**. With the 10.0.1 update, you will get to enjoy the "easy install" wizard that has been available for previous Windows and Linux guests.

Full release notes for the 10.0.1 update are available here: <http://www.vmware.com/support/ws10/doc/workstation-1001-release-notes.html> and of course you can download the full product including this release from the VMware Workstation product site here: <http://www.vmware.com/products/workstation/>

For existing users of VMware Workstation, you should be prompted for the update when you launch the product, but you may also initiate the update by going to the Help menu and clicking on Software Updates.

For brand new users, click the image below to download a free 30 day trial. Editions available for Windows and Linux installations!
